Phil,

Attached are two sketches indicating the proposed stairway between the eighth plus floor and the ninth floor.

Please note that the stair on the east side of the unit was reduced to 3'-6" to clear both the column flange width and the downcomer. We also need to consider the direction and magnitude of the downcomer expansion, as we do not have much clearance at this time. To gain more clearance, we would most likely have to reduce the stair width to 3'-0".

Also, please note that we have moved the stairway on the west side a little further south to gain better clearance by the drain lines.

Please review these sketches and let us know if they are acceptable.

Thanks again,
Rick
